---

Insights for Microsoft Movie Studio

By: John Kanoru Macharia

# Summary

I analyzed the movie datasets from 4 different sources:

- **Box Office Mojo**
- **IMDB**
- **TheMovieDB**
- **The Numbers**

My analysis will help microsoft produce the best possible movies based on movie length, release period and genres.

# Outline

- Business Problem
- Data
- Methods
- Results
- Conclusions

# Business Problem

Microsoft are clueless about movie production and they want to create a new movie studio.

For the new movie studio to be profitable, some of the factors Microsoft needs to be aware of are:

- **Length of the movies.** How long should the movies be?
- **Genres.** What genres are most common and profitable?
- **Release period.** What is the ideal period for them to release movies and be profitable?

# Data

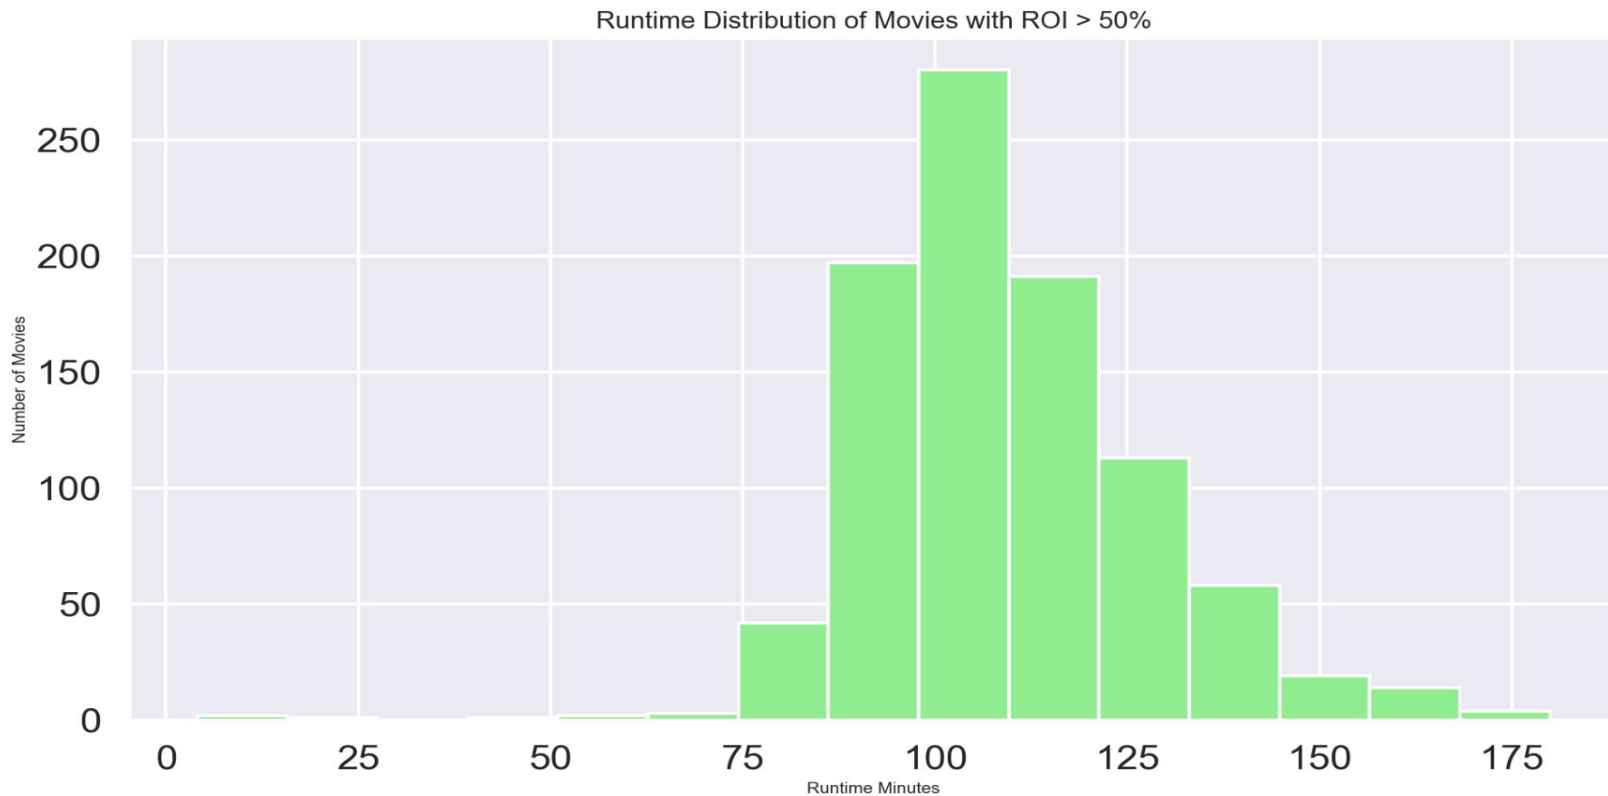

The analyzed data was from Box Office Mojo, IMDB, The Numbers, and The Movie DB.

The data carried information on movie release dates, genres, movie titles, runtimes, studio names and domestic & foreign gross.

# Methods

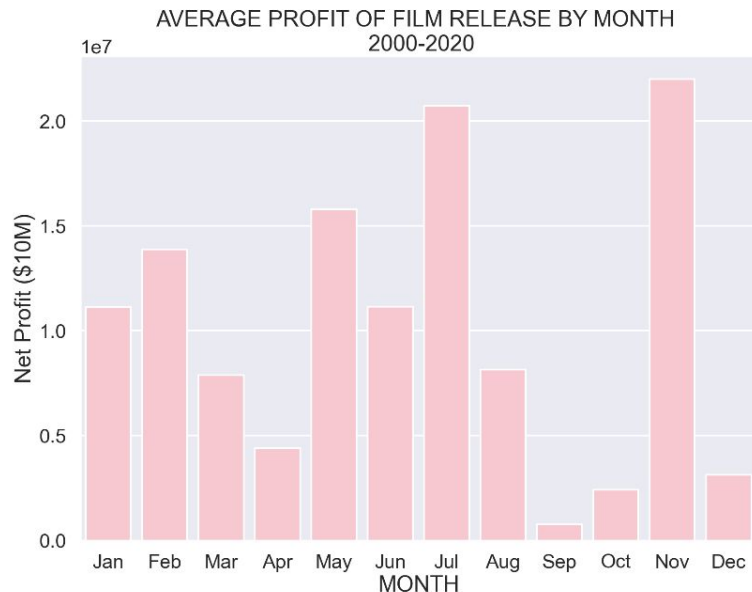

Descriptive statistics as well as visualizations were utilized to shed light on the trends in the movie industry based on the data used.

# Movie Runtime Distribution

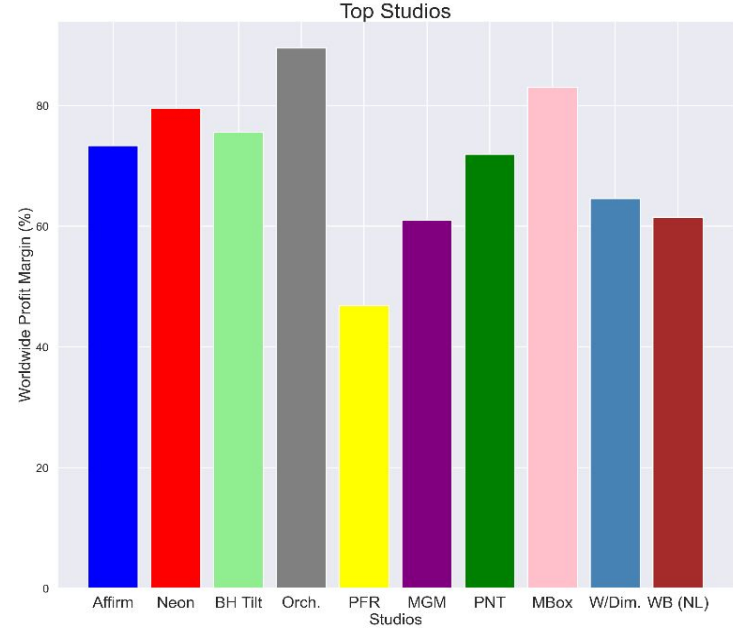

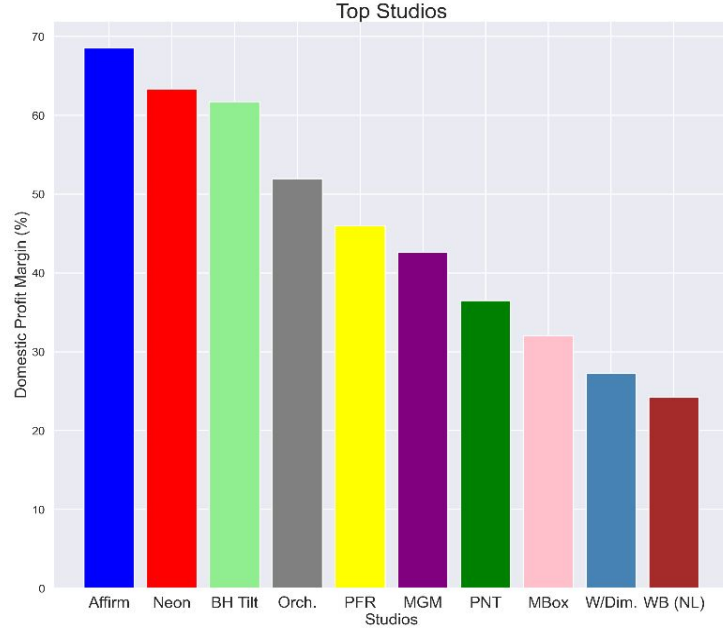

# Release Month

When is the best period to release a movie?

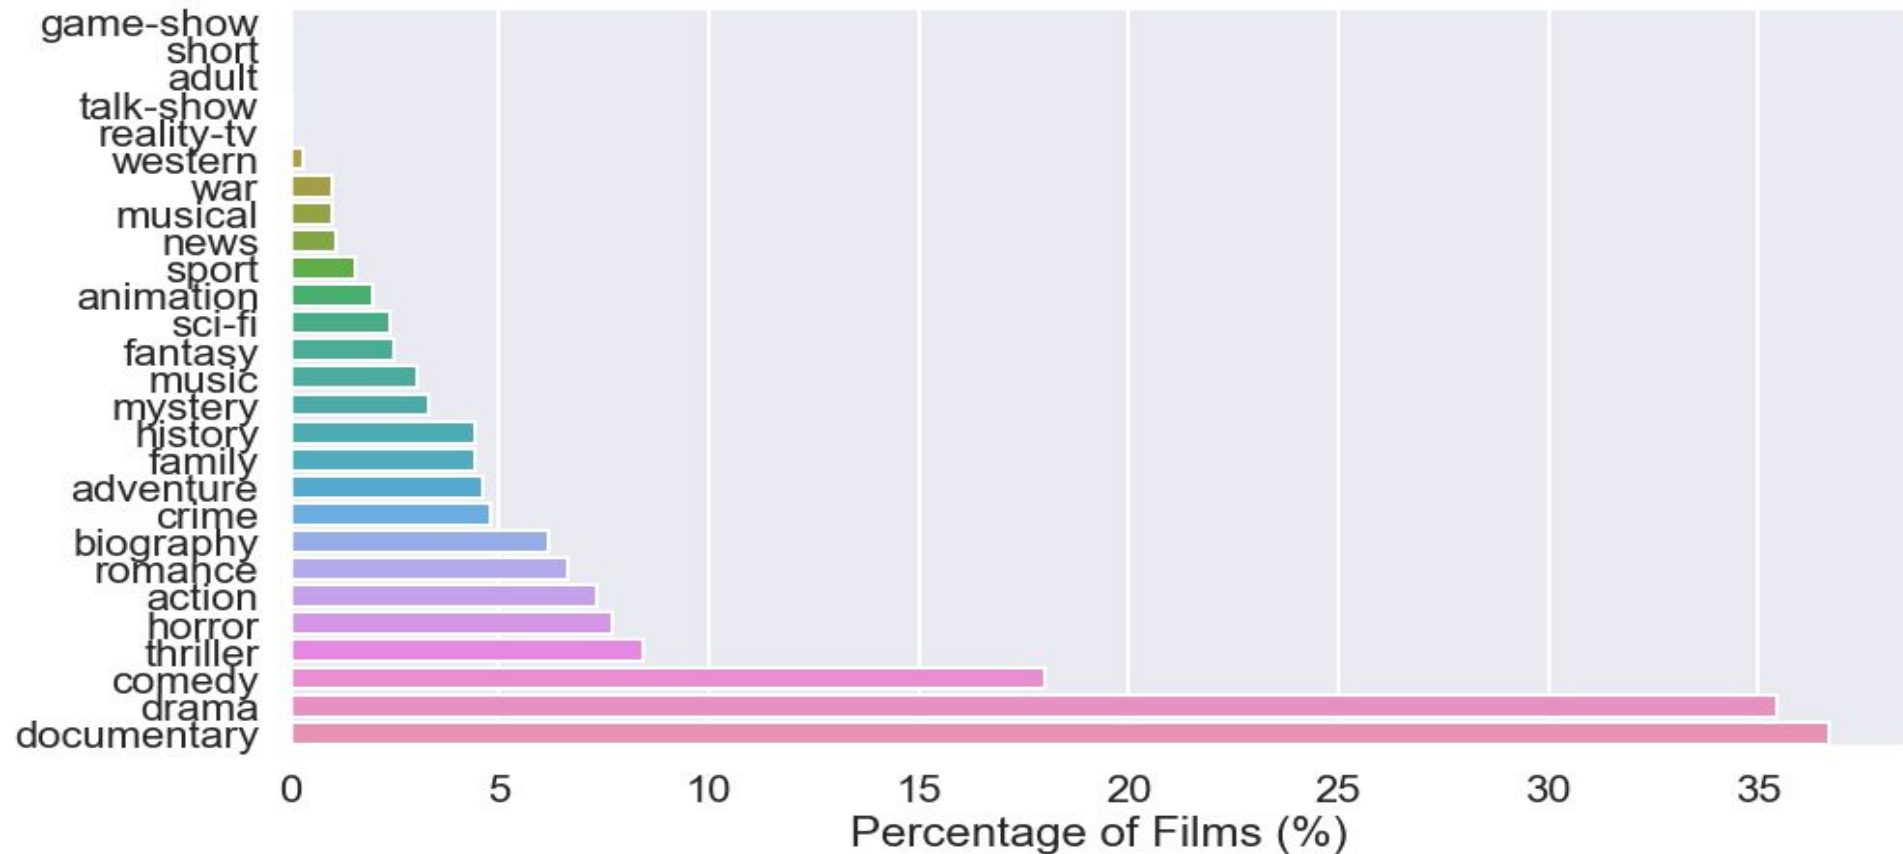

# Top 10 Grossing Studios

# Distribution of Film Genres

# Conclusions

- ❖ Produce movies with runtimes of 90 - 120 minutes.
- ❖ Movie release dates should be kept within the months of May, June, July and November.
- ❖ Microsoft could consider acquiring either of the top grossing studios: BH Tilt, Neon or Orchard film studios.
- ❖ It would be ideal if Microsoft produced movies of the most common genres, i.e., documentaries, drama and comedy.
